Quantity: 449

Arguments in favour of choice made

Heat and glare reduction capabilities of the fabric.
Cost effective pricing, meeting project needs.

Main selection criteria

Semi Transparent vision-out.
Solar Reflection and glare reduction.
Occupancy efficiency and work-place was also high on the priority list.

Problem definition

Office areas that are walled by floor to ceiling glass windows across all four facades which in turn receive sun from all aspects during the day.

Requirements of client / architect

The aesthetic appeal of the roller blinds was important. Though the main focus of the architect was to reduce heat loading and glare for occupancy comfort, whilst meeting costing requirements.

Solution

A roller blind which is functional in terms of heat reduction, glare control and vision out comfort.
